## In the Claims

Kindly amend claim 1 as shown in the following claim listing:

- 1. (currently amended) An electroluminescent device comprising a substrate (1) and, adjacent to said substrate (1), a laminated body composed of a first electrode (2), an electroluminescent layer m (3) directly on said first electrode, a second electrode (4) and 2n+1 transparent dielectric layers (5) directly on said second electrode, where n = 0, 1, 2, 3 ...  $\alpha$ , which transparent dielectric layers (5) alternately have a high refractive index of n > 1.7 and a low refractive index of n  $\leq$  1.7, and the transparent dielectric layer (6) bordering on the second electrode (4) has a high refractive index of n > 1.7.
- 2. (original) An electroluminescent device as claimed in claim 1, characterized in that the transparent layers having a high refractive index comprise a material selected from the group composed of TiO2, ZnS and SnO2.
- 3. (original) An electroluminescent device as claimed in claim 1, characterized in that the transparent layers having a low refractive index comprise a material selected from the group composed of SiO2 and MgF2.
